

Muhammad Hadeed

Software Engineer | Backend Development | Applied AI

Karachi, Pakistan | +92 332 3820417 | dev.hadeed@gmail.com

Portfolio | LinkedIn | GitHub

Professional Summary

Software Engineering graduate with a **3.93/4.00 CGPA** and hands-on experience developing Python backend applications and AI-powered solutions. Skilled in FastAPI, PostgreSQL, Docker, Pandas, NumPy, and scikit-learn through internships and academic projects, with a strong interest in building scalable backend systems and intelligent software.

Education

DHA Suffa University

Bachelor of Software Engineering (CGPA: 3.93 / 4.00)

Oct 2022 - Jul 2026

Karachi, Pakistan

Technical Skills

Languages: Python, JavaScript, SQL, HTML5, CSS3

Technologies: FastAPI, REST APIs, PostgreSQL, MongoDB, Docker, Git, Pandas, NumPy, scikit-learn, Matplotlib, Seaborn, Jupyter Notebook, Bootstrap, Tailwind CSS

Concepts: Backend Development, Machine Learning, Natural Language Processing, Feature Engineering, Model Evaluation, Object-Oriented Programming, API Development

Experience

Mazik Global

AI Intern

Aug 2025 – Oct 2025

Karachi, Pakistan

- Built data preprocessing workflows using Python, Pandas, and NumPy to clean, transform, and prepare datasets for machine learning experiments.
- Performed exploratory data analysis (EDA) using Matplotlib and Seaborn to identify missing values, outliers, trends, and feature relationships.
- Assisted in training, evaluating, and validating machine learning models using scikit-learn while applying feature engineering techniques.
- Documented experiments in Jupyter Notebook and collaborated with AI engineers on model testing and deployment considerations.

Blink Digitally (SMC-Pvt) Ltd

Frontend Developer

Jun 2025 – Jul 2025

Karachi, Pakistan

- Developed responsive web interfaces using HTML5, CSS3, JavaScript, Tailwind CSS, and Bootstrap from Figma designs.
- Debugged layout, responsiveness, and browser compatibility issues using browser developer tools.
- Collaborated with designers and backend developers to support frontend integration with REST APIs.

Projects

JobEZ – AI-Enabled Recruitment Platform | Python, FastAPI, PostgreSQL, Machine Learning

- Developed an AI-enabled recruitment platform featuring resume parsing, cosine similarity-based job matching, and personalized job recommendations.
- Built backend APIs using FastAPI to support resume processing and recommendation workflows.
- Integrated a preliminary interview workflow using Speech-to-Text and Text-to-Speech technologies.

Sentiment Analysis API | Python, FastAPI, NLP, scikit-learn

- Developed a sentiment analysis model to classify user feedback as positive, negative, or neutral using natural language processing techniques.
- Applied text preprocessing techniques, including tokenization and feature extraction, before model inference.
- Built a FastAPI-based REST API to provide real-time sentiment prediction for application integration.

Titanic Survival Prediction | Python, Pandas, scikit-learn

- Built a supervised machine learning model using the Titanic dataset to predict passenger survival.
- Performed data cleaning, exploratory data analysis, and feature engineering to prepare the dataset for model training.
- Evaluated model performance and visualized insights using Python data science libraries.
